In the last lecture we have studied

- Maxwell's equations
- Derivations of Maxwell's equations

$$(1) \nabla \cdot \bar{B} = 0$$

$$(2) \nabla \cdot \bar{D} = \rho$$

❖ Today we are going to discuss on

- ✓ Derivations of Maxwell's equations

$$(3) \nabla \times \bar{E} = -\frac{\partial \bar{B}}{\partial t}$$

$$(4) \nabla \times \bar{H} = \bar{J} + \frac{\partial \bar{D}}{\partial t}$$

pressure difference across the surface

- 1) 1) If surface of liquid is plane
- 2) If surface of liquid is concave
- 3) If surface of the liquid is convex

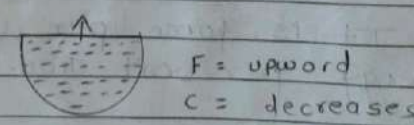

1) If free surface of liquid is plane.

2

If free surface of the liquid is plane then the resultant force due to the surface tension is zero hence cohesion pressure on the molecules is nominal or negligible.

2) If free surface of liquid is concave.

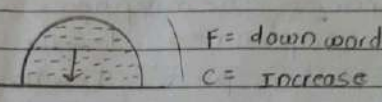

If free surface of liquid is concave then the resultant force

due to surface tension on a molecules is upward direction and cohesion pressure is decreased.

3) If free surface of liquid is convex.

If free surface of liquid is convex then the resultant force on the molecule of the surface is in a downward direction and hence cohesion pressure is increased.

✓ I) Excess pressure Inside the liquid ⑤

Water drop with oblong excess pressure inside

There is a liquid drop have convex surface near the of drop. In inside area. The molecule

2] Excess pressure inside the soap bubble

In state of liquid drop we consider soap bubble. There are two surfaces. It is like a spherical shell or hollow sphere having inner and outer surface.

In this case the force due to the surface tension is $2 \times 2\pi r \cdot T$

hence, for equilibrium hemisphere

$$p \cdot \pi r^2 = 2 \cdot 2\pi r T$$

$$p = \frac{4 \cdot \pi r T}{\pi r^2}$$

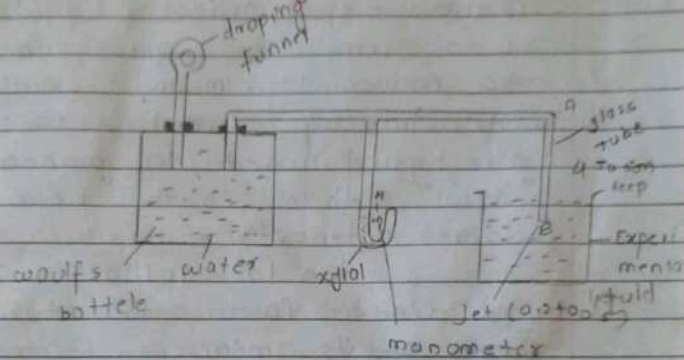

$$p = \frac{4T}{r}$$

4

Scanned with CamScanner

This is the expression for excess pressure inside the soap bubble.

3] Surface tension by Jagers method

Jagers method is useable for to calculate to obtain the surface tension of liquid by using excess pressure inside the liquid drop.

We know that the excess pressure inside the liquid drop

$$p = \frac{2T}{r}$$

Where T is the surface tension of liquid and r is the radius of the drop. Jagers method is the simple method.

Fish Preservation and Fish by products
Technology

Unit-III :Fish By-product Techniques

Topic-Different types of Fish By-products

By

Dr. Korde Seema.

▪ Different types of fish By-Product

▪ 1. Fish Liver Oil:

▪ Fish liver oil is one of the most important by-products of fish. Liver, which is a part of the offal discard during dressing of landed fish, is the storehouse of glycogen and fat along with Vitamins A and D. This property of fish livers of certain fishes like Cod, Shark, Ray, Halibut, Tuna, etc. has rendered it of immense commercial value of providing highly medicinal 'liver oil' Water 20% to 36%, Proteins 5% to 10% and Fats 55% to 75%

▪ As fat carries with it high concentration of Vitamins A and D, the fat of fish liver is the source of vitamins A and D rich liver oil. However, the concentration of vitamin A and fat in the liver varies from fish to fish and from season to season.

▪ Uses of fish liver oil:

▪ Fish liver oil has the following uses:

▪ (1) Crude liver oil is used for burning purposes or making lights in curing yards by fishermen.

▪ (2) Fish liver oil because of its high vitamin A and D contents can cure or prevent occurrence of disease caused by the deficiency in the body of these two vitamins, such as rickets, xerophthalmia, impaired vision and eye defects, abnormalities of skin, mucous membranes and vertebrae.

2. Fish Body Oil:

▪ Fish body oil is the oil obtained from the entire body of fishes like Herring, Sardine, Salmon, Mackerel, Anchovy, etc.

▪ It is also extracted from offal and other wastes
